

This guarantee is now available

The secret is a remarkable new siding from U. S. Plywood—Weldwood PF-15. It's not painted—it's surfaced with a tough, long-lasting film, Du Pont TEDLAR® PVF film. Nobody has yet worn TEDLAR out by exposure to weather, even after years of testing.

This makes Weldwood PF-15 siding a completely new way to protect and decorate your home. U.S. Plywood bonds a film of TEDLAR to rugged plywood siding in the factory, so it becomes an inseparable, waterproof finish.

Ice may coat it, but it won't crack. Sunshine may bake it, but it won't bubble or craze. However humid or salty or smoky or arid the climate

From these leading builders

may be, it won't harm TEDLAR.

Weldwood PF-15 looks like traditional, painted wood siding: attractive colors, smooth, clean surface. But then it keeps *on* looking bright and clean, year in, year out, through rain and shine.

Siding surfaced with TEDLAR resists fading, chalking, crazing, splitting, cracking and bubbling. As a result, U. S. Plywood guarantees its PF-15

siding won't need painting for fifteen years.†

Think of it—this guarantee means you can relax and forget all about refinishing your home until 1979, at the very earliest.

Every builder shown on this page has a fine model home featuring Weldwood PF-15 on display.

Why not go see one today?
